

BATHS

The Regent Bath Tub

The Regent bath is a smaller & more compact version of the Meon bath. A clever solution in bathroom planning, Drummonds Regent bath offers the practicality of above-the-floor plumbing whilst retaining all the style and elegance of a traditional cast iron bath. The skirt of the Regent has been carefully crafted to allow pipework to be connected above the floor but concealed from sight. The result is a bath which both maximises available space and provides the comfort of a classic double-ended design.

For IAPMO/MA listed bathtubs, please specify a tub with slip resistance.
